

Use Automation to Empower Your Workforce

Increased competition, changing customer expectations and a labor shortage have organizations rethinking how they operate today. During a time when employees are resigning in droves, **investing in your employees to ensure they have a meaningful, engaging work experience has become a competitive differentiator.**

Automation capabilities like intelligent document processing can help employees work more efficiently and effectively, while also easing mounting workloads. **Embrace automation software to enhance the employee experience and enable your workforce to do their jobs better.**

The Great Resignation shows no signs of slowing:

38 million U.S. workers quit their jobs in 2021¹

1 million open jobs in the United Kingdom²

1/3 of all German companies reported a lack of skilled workers³

WHY?

Working conditions

Pandemic related fears

Existential epiphanies

YOUR WORKFORCE AND AUTOMATION

1 in 3 workers in America are millennials⁴

30-45 year olds had the greatest increase in resignation rates⁵

35% of millennials believe humans and machines can work together⁶

63% of millennials believe **automation in the workplace is good** and can **alleviate burdens**

Successful companies of the future are the ones investing in technology to benefit their employees.

81% believe automation in the workplace leads to doing **more meaningful work**

43% agree that **impact to overall employee experience** is the most important aspect when implementing any new workplace technology

Introduce ML-powered automation to ease workloads, upskill your workforce, and boost morale.

By investing in technology that augments your people and improves performance over time, you can ensure a meaningful, engaging work environment.
